c Data & scientific use
Research request
Target population
Variables and units
Intended analyses
Published studies
Means & relations
Subgroups & models
Population & measures
Adjustment sets
Reported uncertainty
Optional information
Observed covariates or permitted summaries
1 Acquire & qualify evidence
Use supplied evidence or search missing relations
Interpret study conditions
Choose each finding's role
Reported
Derived
Assumed
2 Author a joint data model
Select distributions, dependencies and numerical parameters
BMI
Assumed r
Glucose
HbA1c
Observed numerical operation
Separate adjusted projections
$c_B = \theta_B + \theta_G r s_G / s_B$
+ declared covariance → joint coefficients
optional revision
3 Execute & inspect
Sample virtual records
Calculate allowed statistics
Check semantics & moments
4 Agent decision
Inspect model diagnostics
Retain or revise
Virtual data products
Age
BMI
Glucose
HbA1c
Whole cohort / enrichment
+ generator & documented evidence / assumptions
Scientific analyses
Regression & subgroups
Nonlinear effects
Longitudinal models
Evaluation reference
Real sample / published model
Study-qualified evidence
Agent: scientific decisions | Tools: retrieval, calculation & sampling
