Prespecified target projections: direction agrees; magnitude differs
A Q1: age
Per 10 years
Adjusted for sex, BMI, glucose
B Q2: BMI
Per 5 kg/m²
Adjusted for age and sex
C Q3: BMI
Per 5 kg/m²
Adjusted for age, sex, glucose
D Q2 − Q3
Per 5 kg/m²
Descriptive coefficient change
E Secondary: glucose
Per 10 mg/dL
Adjusted for age and sex

Construction A
Construction B
Bands: 2.5th–97.5th percentiles of 399 valid cluster resamples; not confidence or equivalence intervals.
Six unique generated tables, n = 2,000 each. Finals retain initials; no synthetic error bars. Horizontal scales vary by panel.
