How do Hb and ferritin vary together?
Nonpregnant US women, ages 20–44
Published evidence
Threshold counts and ferritin by Hb band
Agent models the cohort
Use published findings
Match counts by Hb band
Choose the target pairing
A Weaken the pairing
B Keep the modeled pairing
Generate records
Hb
Ferritin
One row per virtual woman
Analyze the same rows
Threshold odds ratio
Both biomarkers low
Continuous rank correlation
Iron-status example
Hb: hemoglobin
Before sampling the final tables
Check against source statistics.
After the tables are frozen
Compare each estimate with the measured cohort.
