Ross: adults, five visits | Baseline relationships

All six reserved correlations; each generated cohort stays separate. L1–L3 are common-parent lineages.

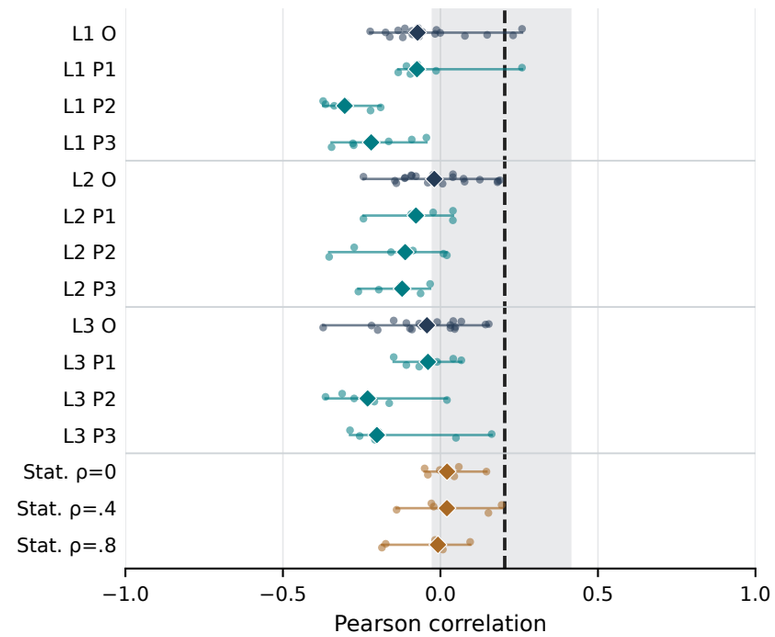

PFS × Go/no-go
Real r=0.052 [-0.177, 0.276]

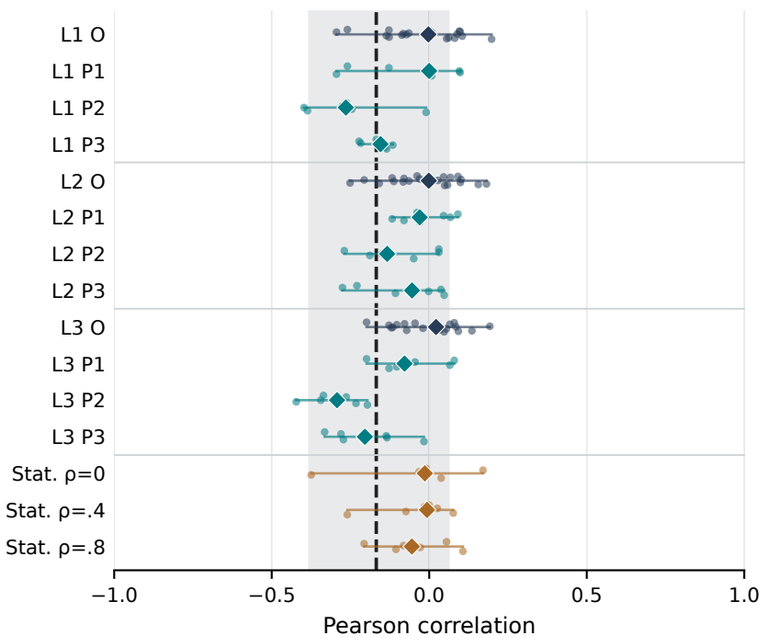

PFS × Discounting $100
Real r=0.229 [0.002, 0.433]

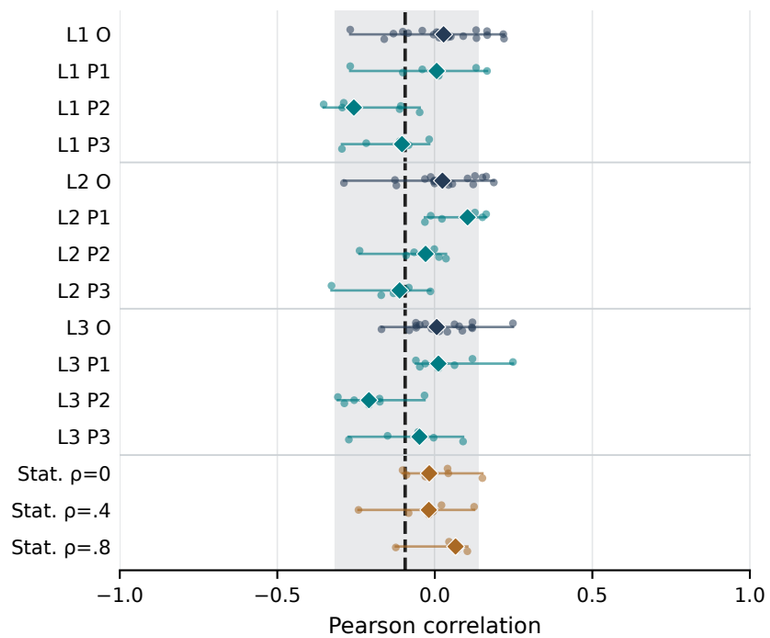

PFS × Discounting $1,000
Real r=0.204 [-0.024, 0.412]

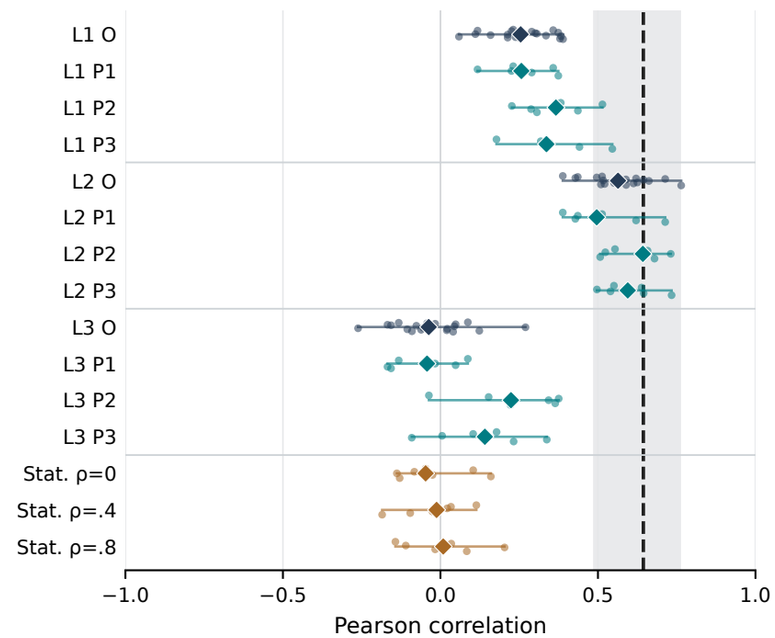

Go/no-go × Discounting $100
Real r=-0.168 [-0.381, 0.061]

Go/no-go × Discounting $1,000
Real r=-0.094 [-0.315, 0.136]

Discounting $100 × Discounting $1,000
Real r=0.644 [0.489, 0.760]

O: ordinary (20 cohorts). P1–P3: separate proposed scenarios (6 or 7 each); mapping in scenario_key.csv.
Statistical ρ contexts are separate reference sensitivities. Synthetic ranges are Monte Carlo ranges, not confidence intervals.
